and deliver value
– in acute care testing**

Your concerns – **first** and foremost

**Patient care
first**

**Quality of
results first**

**Patient
satisfaction
first**

NURSE

LAB MANAGER

ADMINISTRATOR

Whether you are a laboratorian, a clinician or an administrator, you all share the same goal of achieving positive outcomes for your patients.

But each of you plays a different role in achieving that goal, and along with that role, a different set of concerns.

At Radiometer, we put your concerns first.

**Patient flow
first**

ED DOCTOR

**Compliance
first**

POCC

**Cost
management
first**

PURCHASER

For us, it's not about selling you an instrument; it's about understanding your needs – across the hospital – and providing a solution that makes a positive impact in your everyday work.

A solution that helps you comply, excel and deliver value.

Holistic solution approach

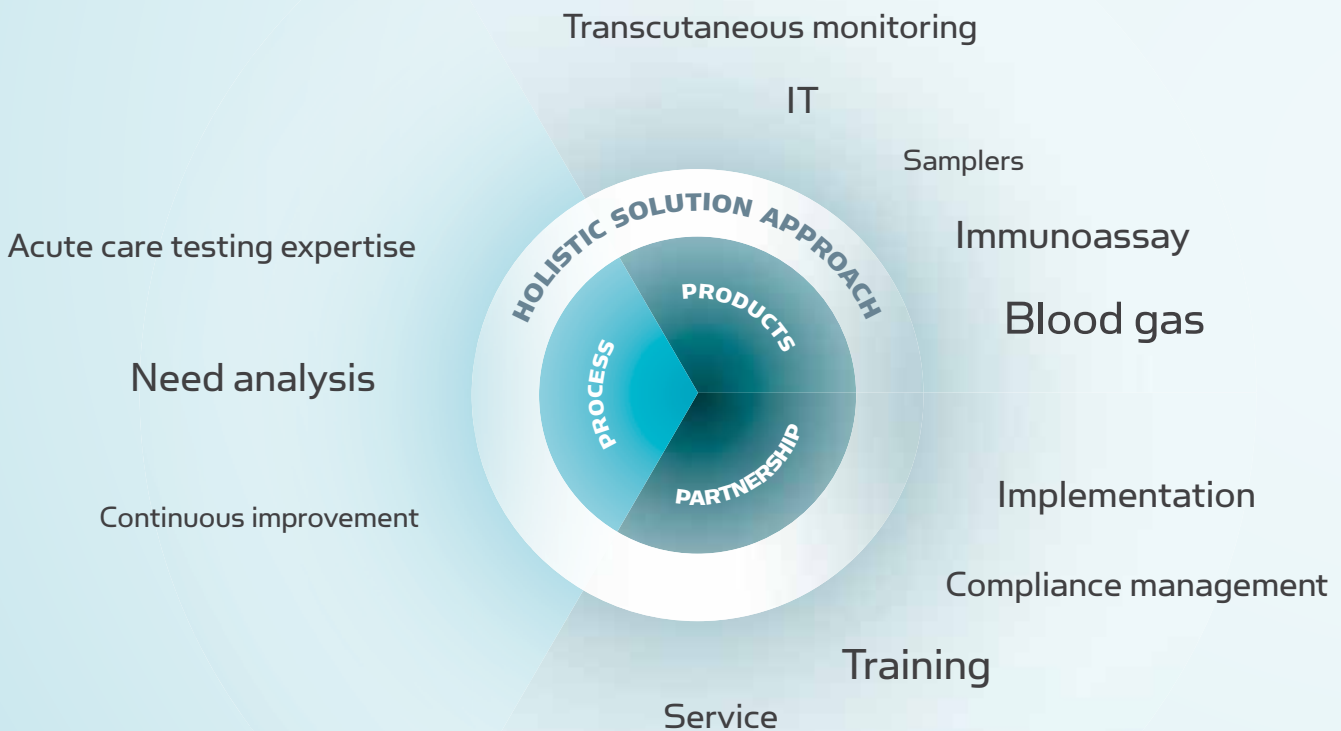

Radiometer takes a holistic approach to developing a solution tailored to your specific needs.

Working with you, we perform a needs analysis of your testing process. Our experts provide insight into your workflow to ensure your clinical objectives are also met.

Radiometer's comprehensive product portfolio meets the needs of acute care diagnostics in blood gas and immunoassay testing and transcutaneous monitoring.

Radiometer's IT solution ensures connectivity with your HIS or LIS, and our sampler line is safety-engineered to eliminate preanalytical errors, needlesticks and blood exposure.

Once implemented, we support your solution with training, compliance management and technical services, and develop a plan for continuous improvement.

Radiometer in your hospital

From the invention of the blood gas analyzer in 1954 to the introduction of the 1st Automatic solution in 2005, Radiometer has led the industry in blood gas testing.

Today, Radiometer's offerings go beyond blood gas to include broader acute care testing solutions tailored to your needs.

Whether your testing takes place in the OR, ICU, ED, STAT lab or core lab...whether your hospital is a small community facility or part of a multi-hospital network...whether you run one test per day or 100...

We work with you to design the best solution to meet both your clinical and financial goals.

“ Five samples are performed every second on a Radiometer analyzer somewhere in the world. ”

Radiometer customer satisfaction survey 2010.

ACUTE CARE TESTING
